To Whom it May Concern

Micropower group - Conflict Minerals Statement

Introduction

“Conflict Minerals” refers to minerals or other derivatives (Tin, Tantalum, Tungsten and Gold) mined in the provinces of the Democratic Republic of Congo and in the adjoining countries where the revenues of these minerals may be financing armed groups engaged in civil wars.

In July 2010, the United States passed an act requiring all US public companies and their suppliers to disclose the chain of custody usage of conflict minerals.

Our commitment

While the companies within the Micropower group (MP) is not subject to reporting to the Securities and Exchange Commission (SEC), MP fully supports this legislation and its position to avoid the use of conflict materials.

MP does not procure minerals from mines or smelters but as our products consists of electronic components, there is a risk of conflict minerals being in our products.

As MP is at the end of the value chain and these minerals pass a number of companies on it's way to the market MP have very limited possibilities to trace the mentioned minerals all the way back to the original country.

However, to minimize the possibility of having minerals of mentioned origin in our products we primarily use large, well known electronic component suppliers known for their social responsibility.

Sincerely,

Torbjörn Gustafsson
Vice President, Micropower Group
